

THIS IS HOW WE ROLL

- Plate rolling for single-piece construction up to 12" thick
- Precision press brake forming up to 22" thick
- Precision parts and fabrications

Now with the biggest roll in the western hemisphere — *up to 12 inches thick and up to 14 feet wide* — there's no reason to go anywhere other than AT&F Nuclear to roll "forging quality plate." With access to prime materials direct from the mill, AT&F Nuclear provides a complete range of nuclear components and complex build-to-print fabrications for new builds, SMRs and nuclear waste containers. Our nuclear industry experience and rolling capabilities provide high quality, tight tolerance fabrications reducing dependence on long lead forgings.

Experience 70+ Years of Reliable Quality.

Call AT&F Nuclear to learn more about our experience and technology for the nuclear industry.
